

FURLEX 500S

Jib furling and reefing system for yachts with 16 mm forestays

- Centred and insulated forestay and completely insulated joining sleeves make furling easier, reduce wear and cut out the risk of corrosion.
- Unique, patented load-distributor for easy furling and unrivalled bearing durability. Lightweight halyard swivel keeps weight aloft to a minimum.
- Sailfeeder in high grade, marine stainless steel for improved durability and service life. Composite connector for the optimum strength-to-weight ratio.
- Tack swivel with a free-turn, combined with the uniform profile of the forestay extrusion, give a perfectly furled sail and effective performance even when reefed. Twin grooves and split drum – allow for fast sail changes and make Furlex easily adapted for racing.
- Unique line-guide system – controls and centres furling line and arranges it evenly onto the drum.
- Fully integral rigging screw (optional) for fast and simple forestay adjustment, without affecting the uniform profile of the extrusion or the drum height above deck. The rigging screw adjusts through 100 mm.
