

Hydraulic outhaul hoses, length and exit hole for keelstepped mast

The exit hole position and the length of the hoses coming out from the mast is optional. The exit hole is located close to the foot of the mast on port- or starboard aft edge as shown in the diagram.

Please fill in these data and send the paper form to Seldén. We will then manufacture the two hydraulic hoses, tailor-made for your boat.

Note that the hoses from in-mast furling motor normally emerge through the same hole.

(For in-mast furling motor hoses see paper form 595-172-E)
