Modification of sloping deck Furlex TD

When angle between forestay and deck is $<72^\circ$ or $>74^\circ$ a modification of deck is needed. Note that a modification might be necessary both fore and aft (Fig. 2) so that the drum does not interfere with underside of deck as shown in Fig.1.

Divide modification fore and aft.

A =
200 TD: 20mm Nom.
300 TD: 20mm Nom.
400 TD: 25mm Nom.
Play between drum and deck should not be less than 5mm here.
